

Special Seismic Battery Racks

passoni
alpha

Besides the standard and seismic rack systems that are offered in series, we build a variety of special constructions for extreme cases, such as container, off shore, power and nuclear power stations or military area.

These racks are designed, calculated and built, according to the specific customer requirement.

In quite special cases mechanical shock absorbing systems are used.

Alpha takes seismic and shock design criteria seriously.

For every construction a static calculation is carried out internally.

When required these racks is subject to a static calculation or computer simulation by an external, neutral expert authority, or being physically tested.

These racks are used worldwide.
